

Amendments to the Claims: This listing of claims will replace all prior versions, and listings, of claims in the application

Listing of Claims:

1. (Previously Presented) A non-porous stent-graft comprising:
 - a graft comprising:
 - an inner layer of a non-porous material;
 - an outer layer of material laminated to said inner layer; and
 - a fastening element adapted to be secured to said stent, wherein said fastening element is fixed between said inner layer and said outer layer, and wherein said fastening element comprises a closed loop penetrating through said outer layer in no more than two locations;
 - a stent disposed around an exterior portion of the graft; and
 - a locking element coupled to the stent and to the fastening element of the graft, wherein the locking element does not pass through the graft.
2. (Previously Presented) The stent-graft as recited in claim 1 comprising a plurality of said fastening elements distributed lengthwise and/or circumferentially on said graft.
3. (Canceled).
4. (Previously Presented) The stent-graft as recited in claim 1, wherein said fastening elements comprise D-shaped rings.
5. (Previously Presented) The stent-graft as recited in claim 1, wherein the material of said inner layer is expanded polytetrafluoroethylene.

6. (Previously Presented) The stent-graft as recited in claim 1, wherein the material of said outer layer is polyester.
7. (Previously Presented) The stent-graft as recited in claim 1, wherein the material of said outer layer is knitted, woven, or braided.
8. (Previously Presented) The stent-graft as recited in claim 1, wherein the material of said fastening elements is a radiographically differentiable material.
9. (Canceled).
10. (Previously Presented) A stent- graft comprising:
a stent disposed around an exterior portion of a graft
said graft comprising:
an inner layer of a non-porous material; and
an outer layer of knitted, woven, or braided material laminated to said inner layer, wherein said outer layer includes a plurality of fastening elements extending outwardly from said outer layer along a length of said outer layer of said tubular graft, wherein each of the plurality of fastening elements comprises a closed loop penetrating through-said outer layer in no more than two locations, at least some of said fastening elements positioned to extend between elements of the stent when said stent is surrounding said graft; and
a locking element coupled to the stent and to the fastening element of the graft, wherein the locking element does not pass through the graft.
11. (Previously Presented) The stent-graft as recited in claim 10, wherein said fastening elements comprise D-shaped rings.

12. (Previously Presented) The stent-graft as recited in claim 10, wherein the material of said inner layer is expanded polytetrafluoroethylene.
13. (Previously Presented) The stent-graft as recited in claim 10, wherein the material of said outer layer is polyester.
14. (Canceled).
15. (Previously Presented) A stent-graft for defining a fluid passageway in a body lumen, said stent-graft comprising:
 - a stent; and
 - a graft, said graft comprising:
 - an inner layer of a non-porous material;
 - an outer layer of knitted, woven, or braided material laminated to said inner layer; and
 - a plurality of fastening elements, wherein at least a part of each fastening element is fixed between said inner layer and said outer layers and wherein each of the plurality of fastening elements comprises a closed loop penetrating through said outer layer in no more than two locations;
 - said stent surrounding said graft and having a plurality of stent elements, each of said plurality of fastening elements projecting into a space defined between the stent elements, said fastening elements being secured to said stent.
16. (Previously Presented) A stent-graft for defining a fluid passageway in a body lumen, said stent-graft comprising:
 - a stent; and
 - a graft, said graft comprising;

an inner layer of a non-porous material;

an outer layer of knitted, woven, or braided material laminated to said inner layer; and

a plurality of fastening elements, wherein at least a part of each fastening element is fixed between said inner layer and said outer layers and wherein each of the plurality of fastening elements comprises a closed loop penetrating through said outer layer in no more than two locations;

said stent surrounding said graft and secured thereto through said fastening elements, wherein said graft is attached to said stent with said fastening elements projecting through said stent and a plurality of looped locking elements securing said fastening elements to said stent.

17. (Canceled).

18. (Original) The stent-graft as recited in claim 15, wherein said fastening elements comprise D-shaped rings.

19. (Original) The stent-graft as recited in claim 16, wherein the material of said looped locking elements is a radiographically differentiable material

20. (Previously Presented) A stent-graft for defining a fluid passageway in a body lumen, said stent-graft comprising:

a stent comprising stent elements; and

a graft, said graft comprising;

an inner layer of a non-porous material; and

an outer layer of knitted, woven, or braided material laminated to said inner layer, wherein said outer layer includes a plurality of fastening elements extending outwardly from said outer

layer along a length of said outer layer of said graft, at least some of said fastening elements adapted to be secured on an outer surface of the stent surrounding said graft, at least a part of each said fastening element being disposed between said inner layer and said outer layer and extending into a space between said stent elements, wherein each of the plurality of fastening elements comprises a closed loop penetrating through said outer layer in no more than two locations; and

a locking element coupled to the stent and to at least one of the fastening elements of the graft.

21. (Previously Presented) A stent-graft for defining a fluid passageway in a body lumen, said stent-graft comprising:

a stent; and

a graft, said graft comprising;

an inner layer of a non-porous material; and

an outer layer of knitted, woven, or braided material laminated to said inner layer, wherein said outer layer includes a plurality of fastening elements extending outwardly from said outer layer along a length of said outer layer of said graft, at least some of said fastening elements adapted to be secured on an outer surface of the stent surrounding said graft, at least a part of each said fastening element being disposed between said inner layer and said outer layer, wherein each of the plurality of fastening elements comprises a closed loop penetrating through said outer layer in no more than two locations, wherein said graft is attached to said stent with said fastening elements projecting through said stent and a plurality of looped locking elements secured to said stent by knotted loops of suture material.

22. (Canceled).

23. (Canceled) A method of making a non-porous tubular graft comprising the steps of:

securing a plurality of fastening elements extending through an outer layer of knitted, woven, or braided material along a length of the outer layer, wherein the fastening elements extend outwardly from the outer layer;

placing an inner layer of non-porous material within the outer layer such that an underside of each fastening element is positioned between the inner layer and the outer layer; and

laminating the outer layer to the inner layer to form the non-porous tubular graft.

24. (New) The graft as recited in claim 1, wherein said graft is attached to an inside surface of the stent with said fastening elements projecting through the stent and wherein said locking element comprises a linear locking element through said fastening elements, wherein said linear locking element is secured to the stent at at least two points along a length of the stent.

25. (New) The graft as recited in claim 24, wherein the material of said linear locking element is a radiographically differentiable material.

26. (New) The graft as recited in claim 15, wherein said graft is attached to said stent with said fastening elements projecting through said stent and a linear locking element through said fastening elements, wherein said linear locking element is secured to said stent at at least two points thereof.

27. (New) The stent-graft as recited in claim 20, wherein said graft is attached to said stent with said fastening elements projecting through said stent and wherein said locking element comprises a linear locking element through said fastening elements, wherein said linear locking element is secured to said stent at at least two points along a length of said stent.
